

2017 First consultation
1 July – 30 September 2017

Compiled comments for Draft diagnostic protocol for *Puccinia psidii* (2006-018)

Summary of comments

Name	Summary
Cameroon	Examen achevé
Cuba	No hay comentarios al PD
EPPO Σ	Finalised by the EPPO Secretariat on behalf of its 51 Member Countries.
European Union	Comments finalised by the European Commission on behalf of the EU and its 28 Member States on 29/09/2017.
Samoa	no further comments
South Africa	No comments from the National Plant Protection Organisation of South Africa.

#	Para	Text	Comment
1	G	(General Comment)	Cameroon Ce protocole de diagnostic est complet, détaillé et abondamment illustré. Il apporte un outil pour l'identification de ce champignon. Il aidera les ONPV dans leurs activités <i>Category : TECHNICAL</i>
2	G	(General Comment)	Myanmar This disease is absent in Myanmar. <i>Category : SUBSTANTIVE</i>
3	G	(General Comment)	Peru We agree with the DRAFT ANNEX to ISPM 27 – <i>Puccinia psidii</i> Winter (2006-018) <i>Category : TECHNICAL</i>
4	G	(General Comment)	United States of America The United States has no comments on this draft standard. <i>Category : SUBSTANTIVE</i>
5	G	(General Comment)	Canada Canada supports the draft annex to ISPM 27 on <i>Puccinia psidii</i> . Minor editorial comments are presented. <i>Category : SUBSTANTIVE</i>
6	G	(General Comment)	Guyana Guyana has no objection to this Annex <i>Category : SUBSTANTIVE</i>
7	G	(General Comment)	Nicaragua En este protocolo se debe tomar en cuenta la especificidad de <i>Puccinia</i> porque para la identificación a nivel de especie, cada especie tiene su propia especificidad, el cual indica que para cada una de las especies deben de diseñarse primers o cebadores para

#	Para	Text	Comment
			su identificación. <i>Category : TECHNICAL</i>
8	G	(General Comment)	Nicaragua Cada análisis de laboratorio tiene sus propias especificaciones de acuerdo al método de ensayo utilizado. Estos instructivos tienen condiciones ambientales específicas que han sido validados o verificados en los mismos procesos de análisis, comprobando la obtención de resultados confiables. Este párrafo 93 esta vinculado al párrafo 39. Nicaragua esta de acuerdo con lo señalado en ambos párrafos. Se propone al Comité de Normas que se continúe la investigación para identificar especies de <i>Puccinia</i> a través de métodos moleculares. <i>Category : TECHNICAL</i>
9	G	(General Comment)	Panama Panama has no comments on this document. <i>Category : EDITORIAL</i>
10	G	(General Comment)	Tajikistan I support the document as it is and I have no comments <i>Category : SUBSTANTIVE</i>
11	G	(General Comment)	PPPO I do agree with the draft. Have not comments to make <i>Category : EDITORIAL</i>
12	G	(General Comment)	New Zealand Have no comments to make on the draft <i>Category : SUBSTANTIVE</i>
13	G	(General Comment)	Bahamas The vast distribution of <i>P. psidii</i> , its means of movement and dispersal and immense social and economic impacts, poses a phytosanitary risk for the region. The Bahamas therefore supports the adoption of this diagnostic protocol. <i>Category : SUBSTANTIVE</i>
14	G	(General Comment)	Thailand agree with the proposed draft DP for <i>Puccinia psidii</i> <i>Category : SUBSTANTIVE</i>
15	G	(General Comment)	Lao People's Democratic Republic Lao PDR agreed with this drafted ISPM. <i>Category : SUBSTANTIVE</i>
16	G	(General Comment)	Honduras HONDURAS NO TIENE COMENTARIOS <i>Category : TECHNICAL</i>
17	G	(General Comment)	Lao People's Democratic Republic Lao PDR has no comment on draft annex to ISPM 27 <i>Category : SUBSTANTIVE</i>
18	G	(General Comment)	Colombia El Instituto Colombiano Agropecuario (ICA), como Organización Nacional de Protección Fitosanitaria de Colombia, revisó y analizó el borrador en cuestión, encontrando que el protocolo de diagnóstico propuesto cumple con los requisitos y esta actualizado de acuerdo con la evidencia científica existente. <i>Category : TECHNICAL</i>

19	G	(General Comment)	Algeria Des précisions sont nécessaires concernant : le nombre d'échantillons à analyser au laboratoire (échantillon représentatif) le contrôle s'il doit être réalisé obligatoirement sur toute les parties de la plante. Le protocole d'analyse est il valable pour les échantillons asymptomatiques. Category : <i>TECHNICAL</i>
20	1	DRAFT ANNEX to ISPM 27 – <i>Puccinia-Austropuccinia psidii</i> Winter (2006-018)	China The Taxonomic state of <i>Puccinia psidii</i> has been changed. See LUDWIG BEENKEN (2017) <i>Austropuccinia</i> : a new genus name for the myrtle rust <i>Puccinia psidii</i> placed within the redefined family Sphaerophragmiaceae (Pucciniales) Category : <i>SUBSTANTIVE</i>
21	17	2016-07 Fe ^{To} Technical Panel on Diagnostic Protocols (TPDP) meeting	China Editorial mistake. Category : <i>EDITORIAL</i>
22	37	As a result of the description of a second rust pathogen from eucalyptus in a recent publication (Maier <i>et al.</i> , 2016), the diagnostic protocol was strengthened to ensure distinction from that rust.	Nicaragua El equipo de revisión del Anexo para NIMF 27 (<i>Puccinia psidii</i>) del IPSA de Nicaragua, considera que: Se sugiere se mantenga lo planteado por Maier <i>et al.</i> , 2016. Category : <i>TECHNICAL</i>
23	38	A real-time PCR has recently been published (Baskarathevan <i>et al.</i> , 2016) and is included in the protocol.	Nicaragua Nicaragua está de acuerdo se incluya. Category : <i>TECHNICAL</i>
24	39	The protocol does not discriminate between genotypes of the rust. Identifying and distinguishing <i>P. psidii</i> pathogenic genotypes is still a research question, and is not robust or reproducible enough for diagnostic purposes yet.	Nicaragua Nicaragua está de acuerdo se sigan realizando estudios para distinguir genotipos y se valide el protocolo. Category : <i>TECHNICAL</i>
25	40	Name of <i>Puccinia psidii</i> has been changed to <i>Austropuccinia psidii</i> Beenken 2017 after the approval of the draft DP for consultation by the SC (Beenken, L., 2017. <i>Austropuccinia</i> : a new genus name for the myrtle rust <i>Puccinia psidii</i> placed within the redefined family Sphaerophragmiaceae (Pucciniales). Phytotaxa, 297(1): 53-61).	Nicaragua Nicaragua sugiere se tome en cuenta la reclasificación del patógeno y se incluya en el protocolo. Category : <i>TECHNICAL</i>
26	53	<i>P. Puccinia</i> <i>psidii</i> is considered to be a threat to plants of the family Myrtaceae worldwide (Coutinho <i>et al.</i> , 1998). Since the rust spread out of its native region, its host range has expanded rapidly (Maier <i>et al.</i> , 2016). As of September 2014, the global host list comprised more than 300 species from 73 genera in this family (Giblin and Carnegie, 2014), but it is likely that the majority of the thousands of Myrtaceae species have the potential to be infected (Carnegie and Lidbetter, 2012; Morin <i>et al.</i> , 2012). <i>P. psidii</i> is not known to infect host plants that are not Myrtaceae. There is evidence of physiological specialization within <i>P. psidii</i> (Graça <i>et al.</i> , 2013), which may have quarantine implications (Roux <i>et al.</i> , 2016).	Canada Sentence to start with the genus name and not abbreviation. Category : <i>EDITORIAL</i>
27	54	<i>P. Puccinia</i> <i>psidii</i> is an obligate biotroph with an autoecious, but incomplete, life cycle, producing urediniospores, teliospores and basidiospores on an infected host (Glen <i>et al.</i> , 2007). Under natural conditions, <i>P. psidii</i> can reproduce quickly and simply through	Canada Sentence to start with genus name and not abbreviation. Category : <i>EDITORIAL</i>

#	Para	Text	Comment
		asexual reproduction whereby urediniospores are produced in pustules known as uredinia. These spores are dispersed to leaves on the same plant or to other hosts, which in turn are infected and on which the pathogen produces pustules with more urediniospores. In some circumstances, the uredinia may switch to producing teliospores, which can germinate <i>in situ</i> to produce basidiospores. Teliospores may also be produced by another type of spore producing body, telia. Teliospore and basidiospore production were initially considered rare stages of the life cycle, but in some regions are often observed along with urediniospore production within a single sorus (Pegg <i>et al.</i> , 2014). While the production of all three types of spores in a host is considered to be a strategy for survival in adverse conditions, the role of teliospores and basidiospores in the life cycle of <i>P. psidii</i> has not been understood (Morin <i>et al.</i> , 2012; Giblin, 2013). Spermatogonia and aecia have never been observed.	
28	55	P. <i>Puccinia psidii</i> prefers wet tropic and subtropic regions where moist conditions and warm temperatures prevail, but a spread to cool regions has been reported (Kriticos <i>et al.</i> , 2013) and the optimum temperature for survival of the fungus is unknown. Disease development is favoured following periods of rainfall or in high humidity or fog. Extended periods of leaf wetness promote urediniospore germination and infection of the host. Urediniospores must encounter a host plant during stages of active growth or flush, which can occur throughout the year depending on the host species and climatic conditions (Pegg <i>et al.</i> , 2014).	Canada Sentence to start with genus name and not abbreviation. Category : EDITORIAL
29	58	Name: Austropuccinia <i>Puccinia psidii</i> G. Winter, 1884	Australia Austropuccinia: a new genus name for the myrtle rust <i>Puccinia psidii</i> placed within the redefined family Sphaerophragmiaceae (Pucciniales) Beenken, L. (2017). Phytotaxa 297(1): 53-61 Category : SUBSTANTIVE

41	95	Symptoms of infection by <i>P. psidii</i> range from minor leaf spots to severe foliage and stem blight, and in some species, flowers and fruits are infected (Figures 2–4). Since establishing it has established in Australia in 2010, the rapid increase-expansion of the fungus' host range has resulted in a wide range of symptoms being observed which vary depending on the host species, the level of host susceptibility within a host species and the age of the host tissue. Symptoms become more obvious during rust epidemics.	Singapore Proposed revision for better sentence structuring. <i>Category : EDITORIAL</i>
42	96	The primary symptom is the appearance of yellow pustules (uredinia) on the upper and lower leaf surfaces of Myrtaceae hosts, with more tending to be found a <u>higher prevalence</u>	Singapore Proposed revision for better sentencing. <i>Category : EDITORIAL</i>

		on the lower leaf surfaces (abaxial). Pustules can also be found on stems, fruits and flowers.	
43	97	The first symptoms and signs of infection are often chlorotic flecks and young sori on leaves, shoots and fruits, which appear two to four days after infection. These early symptoms are similar to those caused by many other pests and disorders so are not enough for a diagnosis disorders. vHence, but lesions identification based on symptoms alone may not be used sufficient for diagnosis. Further confirmation for <i>P. psidii</i> infection can be carried out using molecular testing if there is any reason to suspect it is diagnostic methods. <i>P. psidii</i> .	Singapore Proposed revision to better structure the sentence. <i>Category : EDITORIAL</i>
44	101	3.2 Sampling and sample preparation	Uruguay For symptomless plants, it would be very useful to include the minimum number of leaves, flowers, etc required for <i>P. psidii</i> detection <i>Category : TECHNICAL</i>
45	101	3.2 Sampling and sample preparation	Argentina In the case of symptomless plants, it would be very useful to include the minimum number of leaves, flowers, etc required for <i>P. psidii</i> detection. <i>Category : TECHNICAL</i>
46	102	Samples of suspected rust or suspicious lesions on plant stems, flowers, fruits, shoots or leaves should be collected. Where possible, triplicate samples from each infected host species should be collected, with each sample comprising several lesions. The likelihood of obtaining enough material for DNA extraction and of finding features for a robust morphological diagnosis is increased with an increased number of collected lesions. In the event of an older infection, woody twigs and branches with swellings or galls or other evidence of infection should be sampled.	European Union Disinfection of tools with bleach requires "draining". Is this rinsing with water? Implies that also water is taken to the field in sufficient quantities to rinse the disinfected tools. According to the instructions, paper towelling also needs to be taken to the field. Usually alcohol based cleaning/disinfection is used, also allows flaming of metal parts. If not rinsed than tools will corrode due to bleach. <i>Category : TECHNICAL</i>
47	102	Samples of suspected rust or suspicious lesions on plant stems, flowers, fruits, shoots or leaves should be collected. Where possible, triplicate samples from each infected host species should be collected, with each sample comprising several lesions. The likelihood of obtaining enough material for DNA extraction and of finding features for a robust morphological diagnosis is increased with an increased number of collected lesions. In the event of an older infection, woody twigs and branches with swellings or galls or other evidence of infection should be sampled.	European Union It would be appropriate to provide a definition of "sample" as one person may see it as an individual leaf (with several lesions possible) and others may collect 10 leaves in one sample. In case of the latter, then triplicate samples seems much more than needed. <i>Category : TECHNICAL</i>
48	102	Samples of suspected rust or suspicious lesions on plant stems, flowers, fruits, shoots or leaves should be collected. 		twigs and branches with swellings or galls or other evidence of infection should be sampled.	
50	103	Direct handling of the plant material should be avoided to prevent spread of the disease, as rust spores are readily dispersed by wind and carried on clothing and other equipment, and can survive for up to three months. A new pair of disposable gloves should be worn for each sampling. A paper bag should be placed around the sample before snipping the infected part from the plant. Collecting tools should be thoroughly dipped and lightly shaken in bleach (a solution of sodium hypochlorite (NaOCl) diluted to at least 5% active chlorine) for about 1 min, followed by draining and drying with paper towelling before and after each sampling. Each sample should be sealed in a single paper bag and labelled.	European Union Transport at 4°C is recommended. This is fine, but an exact temperature is hard to implement, especially during mail transport. A temperature range, or a less specific condition (e.g. "cooled") might be considered. <i>Category : TECHNICAL</i>

		for each series of nucleic acid isolation and amplification of the <u>DNA sequence of the target pest or target nucleic acidpest</u> . For PCR, a positive nucleic acid control and a negative amplification control (no template control) are the minimum controls that should be used.	
95	374	Positive nucleic acid control. This control is used to monitor the efficiency of the test method (apart from the extraction), and specifically the amplification. Pre-prepared (stored) genomic DNA, whole genome amplified DNA or a synthetic control (e.g. cloned PCR product) may be used. Any fungal DNA will be a suitable positive control for the ITS1-F/ITS4 primers, and any rust DNA for the ITS1-F/Rust1 primers. The other primer pairs (PpsiBtubF/PpsiBtubR, PPEFF/PPEFR, PpsiITS1F/PpsiITS1R, Ppsi1/Ppsi6 and Ppsi2/Ppsi4) require <i>P. psidii</i> DNA (genomic DNA or suitable plasmid or amplicon) as a positive control. In the absence of a positive control, it may be possible to confirm the presence of <i>P. psidii</i> , but not its absence.	Philippines identify NPPO who are willing to provide genomic DNA to be used as positive control. <i>Category : SUBSTANTIVE</i>
96	375	The efficiency of the extraction method is confirmed with amplification of the rDNA ITS using the primers ITS1-F/ITS4.	European Union Does this require a heading to make it clear it is being used as an extraction control? <i>Category : EDITORIAL</i>
97	375	The efficiency of the extraction method is confirmed with amplification of the rDNA ITS using the primers ITS1-F/ITS4.	EPPO Does this require a heading to make it clear it is being used as an extraction control? <i>Category : EDITORIAL</i>
98	376	Negative amplification control (no template control). This control is necessary to rule out false <u>positives-positives</u> , due to contamination during preparation of the reaction mixture. PCR-grade water that was used to prepare the reaction mixture is added in place of template DNA at the amplification stage.	Ghana <i>Category : EDITORIAL</i>
99	377	Negative extraction control. This control is used to monitor both contamination <u>both</u> during nucleic acid extraction and cross-reaction with the host tissue. The control comprises nucleic acid that is extracted from uninfected host tissue and subsequently amplified. Alternatively, extraction blanks may be processed with the samples to be tested if sufficient uninfected host tissue is not available.	Philippines <i>Category : EDITORIAL</i>
100	380	Baskarathevan <i>et al.</i> (2016) were able to detect 0.011 pg of <i>P. psidii</i> DNA at a Ct of 35, which represents less than one genome copy for an expected genome size of 100–150 mega base pairs. The infected plant samples had a Ct ranging from 17 to 35, depending to some extent on the severity of infection. Samples with a Ct of 35 or less can be regarded as positive, provided controls (negative amplification controls) are negative.	European Union Does a Ct threshold need to be given here? In EPPO Protocols Ct threshold are only provided for situations where the Ct is unusual. For other cases we have the following standard text: Verification of the controls • The PIC and PAC (as well as IC and IPC as applicable) amplification curves should be exponential. • NIC and NAC should give no amplification When these conditions are met: • A test will be considered positive if it produces an exponential amplification curve. • A test will be considered negative, if it does not produce an amplification curve or if it produces a curve which is not

#	Para	Text	Comment
			exponential. • Additionally for SYBR® Green based real-time PCR tests: the T_M value should be as expected. • Tests should be repeated if any contradictory or unclear results are obtained. NIC = Negative isolation control PIC = Positive isolation control NAC = Negative amplification control PAC= Positive amplification control IC= Internal Control IPC= Internal positive controls The instructions to authors state that: 'if the need for a Ct cut-off value has been identified during the validation of the test this should be stated and authors are encouraged to give a range of Ct values observed for true positive samples. The following sentence should appear at the start of this section as a standard text when a Ct cut-off value is mentioned. The Ct value given below is as established in [name of the laboratory] As a Ct cut-off value is equipment, material and chemistry dependent it needs to be verified in each laboratory when implementing the test. So does the range given mean anything between Ct 35 and Ct 40 is considered negative?). Category : <i>TECHNICAL</i>

108	443	4.2 Molecular identification	EPPO There is some replication between these two sections (GenBank accession codes). Can this be avoided? <i>Category : TECHNICAL</i>
109	445	For a definitive identification, the preferred method is to extract DNA from rust spores, amplify the selected region or regions, and compare the sequence data of the fungal barcoding region, the rDNA ITS region, with the sequence or sequences obtained from the epitype and voucher specimens available in GenBank (da S. Machado <i>et al.</i> , 2015, Rodas <i>et al.</i> , 2015). DNA sequencing of secondary regions such as β -tubulin and elongation factor 1 α genes and the rDNA large sub-unit (LSU) region provides support for initial diagnoses. All regions have very low intraspecific variation (<1%), and they have barcode gaps of 10% (ITS), 17% (β -tubulin) or 20% (elongation factor 1 α).	Philippines For a definitive identification, the preferred method is to extract DNA from rust spores, amplify the selected region or regions (indicate the section where this process has been described) <i>Category : SUBSTANTIVE</i>

124	502	9. Figures	EPPO This figure does not accommodate the real time PCR and nested conventional PCR methods. - 98% should be replaced by >98% or actually even better by ≥99% based on my comment above - Is the situation in the bottom left needed (diamond with "Identification of different rust species?")? If the species is not <i>P. psidii</i> but belongs to Pucciniales, then you know it is a rust species other <i>P. psidii</i> . Is it relevant that the exact rust species cannot be identified? <i>Category : TECHNICAL</i>
125	503	 Modify the figure 1 about paraphyses.	China It is difficult to distinguish <i>Austropuccinia psidii</i> from other related rust pathogen of Myrtaceae, such as <i>Phakopsora rossmaniae</i> , <i>Physopella juei</i> , <i>Physopella xanthostemonis</i> , <i>Puccinia cygnorum</i> and so on, by the character of paraphyses. See Simpson et al. (2006). Uredinales species pathogenic on species of Myrtaceae. Australasian Plant Pathology. 35 (5) 549–562. Cummins GB, Hiratsuka Y. (2003). Illustrated genera of rust fungi. 3rd edn. (APS Press: St Paul, MN). LUDWIG BEENKEN (2017). <i>Austropuccinia</i> : a new genus name for the myrtle rust <i>Puccinia psidii</i> placed within the redefined family Sphaerophragmiaceae (Pucciniales) <i>Category : TECHNICAL</i>
126	517	Figure 5. <i>Puccinia psidii</i>: (a), (b) urediniospores; (c)–(d), teliospores and urediniospores; (e) teliospore, and (f), germinated teliospores and basidiospores. Scale bars: 20 µm.	European Union The scale bar in figure f) appears to be slightly out as the description says basidiospores are 8-11 µm in diameter but two of them appear to be the same length in diameter as the scale bar which is 20 µm. <i>Category : EDITORIAL</i>
