

A high-angle, wide-area photograph of Earth from space. The image shows a large, dark blue body of water, likely an ocean or a large lake, surrounded by landmasses. The sun is visible in the upper center, creating a bright, hazy glow over the water and casting long, soft shadows across the land. The Earth's atmosphere is visible as a thin, light blue layer at the top of the frame. The overall scene is a vast, natural landscape captured from a high-altitude perspective.

Pest risk analysis is essential
for countries to fulfill
obligations to trade and to
plant protection

It requires trained people,
available and committed to
pest risk analysis

Analysts need access to information,
in libraries and online

Support for pest risk analysis needs to be stable and a priority

Pest risk analysis is an important investment in food security, trade and the environment

Produced through the International Plant Protection Convention's
Capacity Development Committee.

This and other material on pest risk analysis, including training
information, is available at www.phytosanitary.info/prs.
